

- High Accuracy
- Broad Bandwidth
- Low Zero-drift

Shenzhen Hangzhi Precision Electronics Co., Ltd.

Product Model: HCV1500

Measurement Range: DC ± 1500 V

Accuracy: 0.2%

HCV1500 High-precision Voltage Sensor

HCV series high-precision voltage sensor is a voltage sensor that can measure DC, AC, pulse and various irregular waveforms under the condition of complete isolation of the primary side and the secondary side. It is mainly used in the field of measurement verification and measurement calibration that requires high accuracy, and rail transit, power quality analysis, power analyzer, medical, aerospace, missile, ship and other fields that require high sensitivity, high stability and high reliability.

Product photo

- High Accuracy
- Broad Bandwidth
- Low Zero-drift

Shenzhen Hangzhi Precision Electronics Co., Ltd.

Product Model: HCV1500
Measurement Range: DC $\pm 1500V$
Accuracy: 0.2%

Features

- ◇ Excellent linearity and accuracy
- ◇ Extremely high resolution
- ◇ Extremely low offset voltage
- ◇ Fast response speed
- ◇ Extremely small angle difference
- ◇ Analog output
- ◇ Extremely high stability and sensitivity
- ◇ Extremely low temperature drift
- ◇ Strong anti-interference ability
- ◇ Extremely low noise
- ◇ Broadband

Application Domain

- ◇ Metrology Verification and Calibration
- ◇ Instrumentation (such as power analyzer)
- ◇ Battery detection
- ◇ Power
- ◇ New Energy
- ◇ Aerospace
- ◇ Laboratory voltage measurement
- ◇ Medical equipment (such as nuclear magnetic resonance MRI)
- ◇ Power control
- ◇ Ship
- ◇ Rail Transit
- ◇ Industrial Measurement

Electrical Performance

Parameter	Symbol	Measuring Conditions	Min	Typ	Max	Unit
Primary RMS voltage	V_{PN}	—	—	1050	—	Vac
Measurement voltage	V_{PM}	—	—	± 1500	± 1650	Vdc
Working voltage	V_C	$\pm 5\%$	—	+15	—	Vdc
Power consumption	I_C	V_{PM} range	—	$130 + V_S/R_L$	—	mA
Transformation ratio	K_N	input: utput	—	1500:10	—	V/V
Secondary rated output voltage	V_S	Primary rated voltage	—	± 10	—	V
Secondary output internal current limiting resistor	R_{Lin}		—	100	—	Ω
Secondary output load	R_L		—	>2k	—	Ω

- High Accuracy
- Broad Bandwidth
- Low Zero-drift

Shenzhen Hangzhi Precision Electronics Co., Ltd.

Product Model: HCV1500
Measurement Range: DC $\pm 1500V$
Accuracy: 0.2%

Remark:

1. The internal current-limiting resistor of the secondary output is 100 ohms, which is connected in series with the external secondary output load resistor. When sampling, it is necessary to consider the voltage division of the internal current-limiting resistor.

The secondary output load resistance is large enough to ignore the influence of the internal output current limiting resistor voltage divider.

2. The power supply can be a standard +15V power supply, or it can be customized as a +12V single power supply according to customer needs.

Accuracy Measurement

项目	符号	测试条件	最小值	标称	最大值	单位
Accuracy	X_e	Rated voltage, $25\pm 10^{\circ}C$	—	—	0.2	%
Linearity error	ϵ_L	—	—	—	0.1	%
Zero offset current	V_O	$25\pm 10^{\circ}C$	—	—	± 10	mV
Response time	t_f	Step response up $90\% \cdot V_{PN}$	—	—	± 10	μS
Frequency bandwidth (-3dB)	F	—	0	—	300	kHz

Safety Characteristics

Parameter	Symbol	Measuring Conditions	Value	Unit
Insulation voltage / Between primary and secondary	Vd	50Hz, 1min	6	KV
Creepage distance / Between primary and shield	d_{CP}	—	83	mm
Clearance distance / Between primary and shield	d_{CI}	—	76	mm
Comparative tracking index	CTI		600	

Remarks: After the customized model has reinforced insulation, the isolation voltage can withstand 10KV.

General Characteristics

Parameter	Symbol	Measuring Condition	Min	Typ	Max	Unit
Ambient operating temperature	T_A	—	-40	—	+75	$^{\circ}C$
Storage temperature range	T_s	—	-55	—	+95	$^{\circ}C$
Mass	M	—	—	610 ± 5		g
primary resistance	R_p	—		$> 750K$		Ω
Primary power consumption (rated)	P_p	—		2		W

Remarks: The primary current limiting resistor can be customized according to customer requirements.

- High Accuracy
- Broad Bandwidth
- Low Zero-drift

Accuracy: 0.2%

Application Links and Instructions

Figure 1 Electrical Connection Diagram

Test instruction:

By measuring the output V_{out} voltage (relative to GND), the measured voltage V_p of the primary side can be obtained according to the following formula:

$$V_p = K_N * V_{out}$$

port definition

◇ The input terminal of the measured voltage is two M5 copper studs, and the input terminal is defined as:

HT (+): connected to the positive pole of the measured voltage

HT (-): connected to the negative electrode of the measured voltage

◇ The output terminal is a phoenix terminal with 4 PIN5.08 spacing, and the output terminal is defined as:

+ : +15V

NC: no connection

M : Measurement signal output terminal

G : common ground terminal

- High Accuracy
- Broad Bandwidth
- Low Zero-drift
